考研英语真题 2007年text1 第1段

早9点直播

If you were to examine the birth certificates of every soccer player in 2006's World Cup tournament, you would most likely find a noteworthy quirk: elite soccer players are more likely to have been born in the earlier months of the year than in the late months. If you then examined the European national youth teams that feed the World Cup and professional ranks, you would find this strange phenomenon to be ever more pronounced.

关键位置冒号 → 首段/二段靠前

考研英语真题 2007年text1 第2段

早9点直播

What might account for this strange phenomenon? Here are a few guesses: a)

certain astrological signs confer superior soccer skills; b) winter-born babies tend

to have higher oxygen capacity, which increases soccer stamina; c) soccer-mad

parents are more likely to conceive children in springtime, at the annual peak of

soccer mania; d) none of the above.

astronaut n. 宇航员 astronomy n. 天文学 be capable of doing

with unsurpassed might 以无法超越的力量

be able to do

astr- = star

考研英语真题 2007年text1 第3段

早9点15直播

Anders Ericsson, a 58-year-old psychology professor at Florida State University, says he believes strongly in “none of the above.” Ericsson grew up in Sweden, and studied nuclear engineering until he realized he would have more opportunity to conduct his own research if he switched to psychology. His first experiment, nearly 30 years ago, involved memory: training a person to hear and then repeat a random series of numbers. “With the first subject, after about 20 hours of training, his digit span had risen from 7 to 20,” Ericsson recalls. “He kept improving, and after about 200 hours of training he had risen to over 80 numbers.”

conduct v. n. 执行; 得胜; 运行; 导电... 行为举止; 运营

考研英语真题 2007年text1 第5段

早9点直播

Ericsson and his colleagues have thus taken to studying expert performers in a wide range of pursuits, including soccer. They gather all the data they can, not just performance statistics and biographical details but also the results of their own laboratory experiments with high achievers. Their work makes a rather startling assertion: the trait we commonly call talent is highly overrated. Or, put another way, expert performers—whether in memory or surgery, ballet or computer programming—are nearly always made, not born.

perform v. 表演; 表现; 执行

range n. 范围; 界限; 一系列 v. 变化; 排序

biograph n. 传记; 生平

autobiograph n. 自传
